

Exercise 1

- 1) When ping is invoked it puts a period in and then starts a new line.
When baffle is invoked it prints 'wug' and then invokes ping.
- So the output of the program is:

No, I wug.
You usugga wug.
I wug.

- 3) If you invoke baffle at the end of the ping method you'd get a stack overflow error because it would continue to loop the following:

wug.
wug.
wug.
etc.

ad infinitum
